Version 1.1

1 Executive Summary

1.1 Objective

Develop an automated engineering reporting workflow capable of identifying early fault indicators within vehicle sensor data and presenting the results in a standardised engineering report.

1.2 Scope

The reporting system analyses validation data collected during endurance testing and generates:

- KPI summaries
- engineering charts
- anomaly detection
- recommendations
- standardised documentation

1.3 Overall Result

PASS

The reporting workflow successfully identified abnormal sensor trends while reducing manual reporting effort.

Version 1.1

3 Engineering Background

Modern vehicle testing generates thousands of sensor measurements every minute.

Manual review is:

- time consuming
- inconsistent
- difficult to reproduce

This reporting system demonstrates how Python automation can transform raw engineering data into clear decision-making information.

Version 1.1

14 Engineering Findings

14.1 Observation 1

Temperature increased steadily throughout the endurance cycle without exceeding allowable limits.

14.2 Observation 2

Voltage remained stable with only minor drift occurring during peak operating temperatures.

14.3 Observation 3

Pressure values followed expected system behaviour with no abnormal spikes.

14.4 Observation 4

No sensor dropout events occurred.

Version 1.1

16 Recommendations

The following improvements are recommended:

- Continue monitoring voltage stability during hot weather testing.
- Increase validation duration to include longer endurance cycles.
- Add automatic fault classification.
- Integrate dashboard reporting into Power BI.
- Schedule automated report generation after each validation run.

Version 1.1

17 Benefits

The automated reporting workflow provides:

- reduced manual effort
- repeatable reporting
- standardised engineering documentation
- improved traceability
- faster engineering decision making

18 Deliverables

This project includes:

- Python data processing scripts
- Automated charts
- Engineering report template
- Sample dataset
- Documentation standards
- Workflow documentation

19 Skills Demonstrated

- Engineering reporting
- Python automation
- Data analysis
- Technical writing
- Process optimisation
- Engineering documentation
- KPI reporting
- Data visualisation

20 Future Improvements

Potential enhancements include:

- Machine learning anomaly detection
- Live dashboard integration
- SQL database connectivity
- Automatic email distribution
- Multi-project reporting
